ONE OF THE GARDEN SPOTS OF THE WORLD.

Fertile Soil, Abundant Water and Other Inducements Offered to Home Seekers.

This county is one of the garden spots of the world, and lies on the western slope of the great conti nental divide, being part of the Pa cific water-shed. Aside from its grea resources as an agricultural and stool country its scenery is very beautiful On all sides great rocky masses. broken into picturesque formations. are to be seen across wide, fertile valleys. The county is watered by three large rivers, and from their junction below Farmington the view a grand and impressive.

FARM LAND ON THE SAN JUAN. In this valley, from a point about ten miles above Largo, there is a uarrow strip of bottom land on each side of the river. At the town of Largo the river bottom widens out into rolling mesas and bottom lands which are available for cultivation. The most important of these tracts are known as the Bloomfield and Solomon mesas, which, with the bottom lands under them, will aggregate somewhat over 20,000 acres. They are on the north side of the river. From thence to the junction of the Animas, the mesa lands are broken into detached plateaus rather difficult to irrigate. The Animas and La Plata empty into the San Juan near Farmington. On the two points of land formed by the rivers are about 12,000 or 15,000 acres of fine laud all | did the ancient. Aztec is the county | under ditch. Beginning then at the mouth of the La Plata, and for twenty miles down the San Juan, to where large stores, hotel and livery and barley, \$1.40; corn, \$1.50; bran, per it breaks through the Hogback, (a stage stables. The county jail is a ton, \$18 Vegetables of every variety line of low hills) there is a continuous series of mesas with about a mile wide of bottom land A little over 15,000 here are now under ditch. To the north of this are a series of high meadows, or vegas, estimated to contain 44,000 acres. Besides this, and to be properly considered in the San abundant harvests. Apples and to-Juan basin, are the lands on either matoes seem peculiarly adapted to side of the Canon Largo, Canon the soil. The population of the town Blanco and Canon Gallego, These and surrounding country is between will include the land along the river 550 and 600 persons. and down to the sixth correction line, north; south of this line there are twenty-four townships of land, the water facilities of which are only of the Rio Cuaco or Chusco and the devoted to cattle and sheep raising, appearance. but the prospects of using a consid erable area of this land for agriculture

50,000 acres of which are now under town a solid plantation of three or extends back into the blaff on a very ditch, A large area outside of this, on the high mesas, is susceptible of alfalfa fields, grain and meadow is there is an immense mesa stretching irrigation, and will ultimately be seen. Here is at present the densest in that direction. Immediately across

just east of the 108th meridian. It are several good stores, public stables, is formed by the junction of two important torrential streams, and will Near this town are located several of these veins on the La Plata, says irrigate, if properly handled, 40,000 brick kilns, a saw mill and a roller acres of fruit land. Of this amount process floar mill.* It is a very pretty. It under ditch, and it would not be wise of energy and public spirit. to advise large settlement on any new lands, unless some scheme were new lands, unless some scheme were devised by which the whole amount of the water could be handled by some comprehensive authority. This river flows thirty miles within San Juan county. The farming lands beard of the La Plata valley. On the western side the land rises in three begin at Cox's crossing and take in a terraces, one over the other, every of a good coking character. Some of strip varying from a quarter of a one or which is highly cultivated. The sight would remind one more of a French landscape than a western a short time was roasted into a fine 2000 cubic feet per second. One of the peculiarities of this and the San Juan river is that the bottoms are community as yet removed from railroads, and ten years ago given over to the Indians as a hunting found in a thick strata between slate. composed of beds of small, round, ground. Alfalfa and fruit are the water-worn boulders of unknown principal productions. This part of the county is a very picture in its boulder bed than on the surface. Along in the river valley proper also thought well of it, and many of Along in the river valley proper there are about 18,000 acres of good their monuments in the shape of land, the most important area of rudely pictured and sculptured rocks which is from Aztec to below Flora Vista.

FARMINGTON GLADE.

were brought to this place there is no better piece of land for raising leciduous fruits. It is protected, fertile and beautiful.

THE LA PLATA VALLEY.

The La Plata river flows in a deep. sandy bed, and its waters generally disappear in the last week in August or the first week of September. On the upper part of this river after it enters San Juan county there are about 8000 acres cultivated; and at Jackson, near its mid-course, there is a small Mormon colony who till about 1000 acres. The river has an average fall of forty feet to the mile, is about thirty feet wide and has a mean average flow of about 250 cubic feet per second. The ultimate reclamation of lands in the La Plata valley will be large.

ACTUAL WATER RESOURCES. It will be seen from the foregoing that there are available from these three rivers 6250 cubic feet of water per second. At the low estimate of 160 acres to each cubic foot, this is sufficient to irrigate 1,000,000 acres of land. According to a county pamphlet issued for circulation at World's fair, there are 175,000 acres available for irrigation. In addition to the value of the water for irrigation, it is a constant source of water power. The San Juan and Animas are constant streams, not affected by the most enduring grouth. The wasted power of their waters would furnish heat, light and electrical motive force far in excess of any possible need of this county. At present the only use made of all this wealth of water is to irrigate about 25,000 acres, the larger part of which

ciations of farmers.

THE LOWER SAN JUAN.

Olio, Fruitland and Jewett are sit-Besides the valley of the Animas there is an important area of land included in the Farmington Glade, population of the three is about 600 an introvale between the Animas and La Plata rivers. It is a strip of country two or three miles wide by eighteen miles long. It will aggregate 25,000 acres of good irrigable land well adapted to fruit raising. In the glade, and beginning at about the latitude of Aztec, is a fine body of public land, subject to desert mon bishop and is cultivated accordof public land, subject to desert land entry, that would make homes for a small colony. The ditch would be comparatively inexpensive as a natural opening in the hillside affords range. If water of intensive culture in the territory.

Is the property of the resident alorated according to the theory of his people that a small place well cared for is more valuable than broad acreage poorly farmed. It is one of the best instances of intensive culture in the territory.

LARGO.

This town may be considered the San Juan. Taking in with it the little settlement on Pine river and at Bloomfield, the population is between 1000 and 1200 persons, the majority of whom are of Spanish descent. The high culture of the fields, orchards and vineyards speaks well for the progress of the community.

The first trees were planted in this county ten years ago, and as an experiment seemed very doubtful. The first settlers were principally cartle men, who knew little about farming. They profited by their first mistakes, however, and prospered, so that the reputation of these valleys is known all over the southwest. The southern towns of Colarado, outside the San Luis valley, are almost wholly supplied from the San Juan orchards. So remunerative has fruit culture proved that in 1891 23,000 trees were averaged \$5 per ton. planted, and in 1892 about 50,000 The planting of 1893 is not yet accurately known, but will show a ratio of progress. Last year at the Albuquerque Territorial fair the fruits of this county took the sweepstakes be raised here. prize. The peaches in some instances measured nine inches in circumference, apples thirteen to fourteen inches and weighed sixteen to nineteen ounces. Single acres of fruit land return from \$400 to \$500; and in one orchard near Farmington are three trees, of whose yield an accurate account has been kept for four years past, that show an average return of \$53 per tree.

Cereals of all kinds are grown here, wheat yielding 20 to 40 boshels per sere; oats, 30 to 80 bushels; barley, 30 to 60 bushels; rye, 15 to 30 bushels; corn, 25 to 50 bushels. A ready sale is found at good prices. Current prices for 1893 were as follows: Wheat, per cwt., \$1.40; oats, \$1.50; flourish, from the hardier varieties, The surrounding country is well such as Irish potatoes, turnips and cutivated, the farms extending up bests, to the more tender melons, eggplants, tomatoes, etc.

ALFALFA

Is, however, the staple crop in this county; drouth is not to be feared and neither frost nor cold endanger IT'S THE SIMPLE, TRIVIAL INVENTIONS it. Owing to the advantageous situation of the county the farmers have taken to fattening beef cattle. For this purpose the sales of alfalfa are large, frequently amounting to from This little village and vicinity has 500 to 1000 tons to a single buyer. From 1891 to 1892 the increase in | is situated at about the widest part sifalfa production amounted 7000 tons. The averave yield per aere is from 4 to 10 tons.

MINERAL WEALTH.

This whole county is underlaid Farmington and Junction City are prospected to any extent. They are necessary is to strip the outer layer. which has been exposed to the weather for ages, and the fine glit-tering material is found, free from found in a thick strata between slate and sandstone of a very fine grain.

It is said that gold and metallic iron can be found; and the best building stone, both sandstone and granite, abound. The best mining camps of Colorado and splendid mineral belts in New Mexico are contiguous. When railroads penetrate this county the neighborhood of Olio will afford splendid opportunities for large smelters.

*Since the foregoing was published by the ba-reau of immigration the flour mill was destroyed by fire, but will be rebuik, this summer. †Junction City is just across the Animas from Farmington, but depends on Farmington mer-chants for supplies.

Patented land with water can be had at from \$15 to \$50 per acre. Besides this there are thousands of acres of government land that can be

Crops and Prices of 1893.

The following table shows the fruit center of population on the upper | yield of the county and average market price of 1893:

Besides the produce mentioned in the foregoing table the county produced 35,000 pounds of honey at an average price of 121 cents a pound, and 30,000 tons of alfalfa hay which

Questions Answered.

Irrigation is the best means of fer tilizing land.

Every kind of deciduous fruit can As a fruit raising country the San

Juan has no equal,

Water can be put on arid land at a cost of from \$2 to \$15 per acre.

New Mexico took first prize for wheat at the World's fair, and second for oats.

The last census gives thirty acres as the average size of an irrigated farm in New Mexico. As a health resort for persons with

weak langs San Juan county has few peers and no superiors. Rough lumber here is worth \$25

per thousand, brick \$8 per thousand. and lime 40 cents per bushel Fire clay is found in large quanti- grades of leather.

ties on the lower San Jann, and a Ene quality of fire brick can be manutaeured at a nominal cost.

Experts pronounce the San Juan coal as a steam producing coal far shove the average, if not the very

best quality in the world. Any information relative to the county not given in the columns of THE TIMES will be cherrfully turnished upon application to the pub

lisher. Water rights in company direbes cost from \$2 to \$15 per acre, with an additional cost of from \$1 to \$: ananally per acre to pay for repairs, lu most cases this annual assessment

can be worked out.

Sheep do well in this county. Scab and other sheep diseases are nuknown here. Thousands of acres of government land are contiguous to the streams and watering places on which they can graze nearly every month in the year. Large bunches of the westers can be fattened on alfalfa hay during the winter, and the mam flocks carried over on it at a small cost, thus making sheep raising a profitable industry. The native sheep make a most excellent cross to breed the mutten producing strains of eastern sheep to.

A tannery is needed and would be a good investment in this county. There are over 500,000 acres of cana. agria growing wild here. It yields as high per acre as ten tons wild and from thirty tons upward under cultivation. This plant contains 331 per cent of tannic seid, the highest average of any known agent. The tannery would be furnished with a home supply of tauning matter without the cost of a cent of freight. This cana-agria is being shipped to Europe at a cost of between \$80 and \$100 per ton, several firms there u-ing it for the preparation of their best
